

M-VAVE FM-1 factory presets: where each voice came from

All 128 factory voices were captured from the M-VAVE restore tool over SysEx and decoded to standard DX7 packed format. 126 of the 128 are byte-identical to voices in BlackWinny's Dexed_cart_1.0 compilation (3,525 banks, 29,615 unique patches). Comparison is on the 112 parameter bytes of each packed voice; the 10-byte name field is excluded and reported separately. Paths beginning Keyboard/, Plucked/, Brass/ and so on sit inside that collection's "Instruments" category tree. FM-1 names follow the folder a patch was found in rather than the patch itself, which is why DX7's BANJO is listed as GUITAR 3.

Notes

Slots 115, 119 and 123 hold byte-identical copies of one voice, named SAW EM UP, SAW EM UP2 and SAW EM UP3. The FM-1 therefore ships 126 distinct voices rather than 128.

Slot 116 is identical to a patch named BIG BEN, but the FM-1 calls it BI BEN. The G was replaced by a space somewhere in M-VAVE's import.

40 of the 128 also trace to official Yamaha DX7 cartridges (ROM1A-4B and VRC101A-112B). Those patches appear throughout the community collection, so they were picked up incidentally rather than taken from Yamaha directly.
